

# DRAINAGE SOLUTIONS FOR A GREENER FUTURE

# ECOFLO 100

ENGINEERED FOR 100 YEARS OF SERVICE LIFE

## GO GREEN BY CHOOSING GOLD

### GOLD = A GREENER FIELD

The average drainage system designed with Prinsco pipe will help improve overall crop health and productivity.

### GOLD = A GREENER BOTTOM LINE

Properly drained fields with Prinsco tile will average higher yields with less wasted chemicals and fertilizer. For that reason, a well designed drainage system will pay for itself in 5 - 7 years, adding net profits to your bottom line for generations to come.

### GOLD = A GREENER WORLD

The average farm drainage system requires 2,000 feet of dual-wall mains. Using ECOFLO100 can eliminate the new demand for **1,233 gallons of oil and 54 cubic yards of landfill space!**

### GOLD = A GREENER FUTURE

A drainage system backbone designed with high performance ECOFLO100 will ensure your farm's green future for at least 100 years... or many generations to come.

For over 30 years, Prinsco has been providing farmers with drainage solutions to ensure a greener future. That has always meant more green in the field for more green in your pocket! Now, Prinsco has given your greener future a whole new meaning with an environmentally-friendly product called ECOFLO 100. It's a dual-wall pipe made with a minimum of 40% recycled content and engineered to provide maximum water flow and capacity for your critical drainage mains. Most importantly, it's tested and verified to offer a 100 year service life – an unprecedented performance level for any drainage pipe on the market today!

With ECOFLO 100 at the core of your drainage system, your farm's green future can be passed on from generation to generation. Now is the time to go green by choosing gold!

# ECOFLO100: A DRAINAGE SOLUTION FOR A GREENER FUTURE

## CHOOSING THE PROPER DRAINAGE MAINS:

**SIZE:** Proper main size is critical to successful drainage. As weather becomes more unpredictable, we encourage you to plan for current and future drainage needs. ECOFLO100 is available in the most common main diameters of 12" - 30".

**PERFORMANCE:** Dual-wall HDPE has proven to be a high performance choice for drainage mains. ECOFLO100 meets or exceeds the material performance and matches the burial depth standards of all dual-wall HDPE mains on the market today.

**SERVICE LIFE:** While standard dual-wall HDPE has proven to last 50+ years, ECOFLO100 now offers an unprecedented 100+ year service life.

**GREEN-FRIENDLY:** ECOFLO100 is the first green-friendly product engineered to meet and exceed the performance needs of your drainage mains.

## ECOFLO100 MAIN SIZES:

DIAMETER	NUMBER	NOMINAL LENGTH
12"	12EF20NP	10'/20'
15"	15EF20NP	10'/20'
18"	18EF20NP	11'/20'
24"	24EF20NP	11'/20'
30"	30EF20NP	11'/20'

*Sizes 4" - 10" and 36" - 60" are also available. See our catalog or web site for more details.*
