

Tables 1 and 2 provide the cumulative storage volumes for the HydroStor HS75 chamber and end cap, as well as the total storage volumes within their respective footprint. These tables can be used to estimate the stage-storage volumes for a retention or detention system. Contact your local Prinsco Representative for more information regarding incremental storage volumes.

- 1) Calculations assume 6" (150 mm) of stone above chambers, 6" (150 mm) stone for foundation, 6" (150 mm) of stone between chambers and 40% stone porosity.
- 2) Add 1.12 ft³ (0.032 m³) of storage for each additional inch of stone foundation or stone cover.
- 3) An additional 9" (225 mm) of stone and storage on the side of perimeter chambers, adjacent to trench walls, is not included in Table 1. Add 0.177 ft³ (0.005 m³) of storage per inch of depth for each perimeter chamber.
- 4) Manifold and related additional storage is not included in Table 1 or 2.
