HydroStor® HS290 Chambers

Application Types:

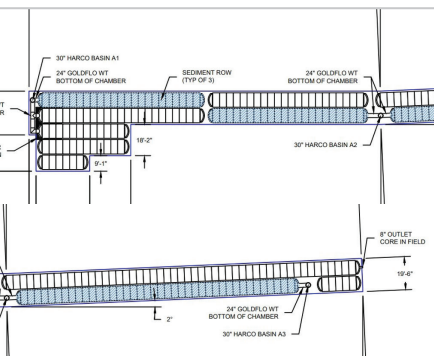

Underground Detention
System

Installation Date:

March 2023

Location:

Mesa, AZ

HydroStor® Chambers Maximize Space for Arizona Apartment Complex

Prinsco's HydroStor system recently proved its value at a new apartment complex in Mesa, Arizona. Faced with heavy rainfall potential, the project needed a solution to prevent flooding and maximize usable space. Enter HydroStor!

Key Project Features:

- **Massive Capacity:** 396 HS290 chambers provide nearly 75,000 cubic feet of underground stormwater storage, preventing parking lot floods.
- **Built to Last:** Chambers meet AASHTO Section 12 load rating and ASTM standards, ensuring long-term performance under heavy traffic.
- **Low-Maintenance Design:** The Prinsco Sediment Row traps over 80% of sediment, simplifying upkeep and extending system life.

This project demonstrates Prinsco's commitment to collaborative solutions. We worked closely with the team to design and install a system that met their unique needs, showcasing our dedication to service and partnership. Prinsco offers a full range of HydroStor chamber sizes plus essential components like inlet basins and piping to tailor systems to any site.
